5	FINANCIAL SUMMARY AND DETAILED PLAN OF EXPENDITURE Судалгааны ажлын төсөв, түүний задаргаа	Total 45 000 thousand. : <ul style="list-style-type: none"> • Ferry researcher's airfare and travel expenses - 18 000 thousand. • Guest scholarships are 9 000 thousand. • Purchase a computing computer 5 000 thousand. • Sample preparation, purchase and measurement of samples 10 000 thousand. • 3000 thousand for organizing workshops and participation in conference
6	RESEARCH PERIOD AT THE NATIONAL UNIVERSITY OF MONGOLIA /PLEASE ENCLOSE VERIFICATION DOCUMENTS/ МУИС-д ирж ажиллах хугацаа (нотох баримтыг хавсарах)	From March 1, 2020 to December 31, 2020.
7	RESEARCH PROJECT BACKGROUND, OBJECTIVES, AND INTELLECTUAL MERIT МУИС-д ажиллах үндэслэл, шаардлага, судалгааны ажлын ач холбогдол	Close cooperation with leading Ukrainian schools and laboratories. The volume of scientific research at the physics department of the National University of Mongolia is necessary to increase the number of studies and improve the quality of the environment.
8	EXPECTED RESULTS (SCIENTIFIC ARTICLES FOR SCI, SSCI, A&HCI JOURNALS, PATENTS) Хүлээгдэж буй үр дүн (импакт фактор бүхий сэтгүүлд хэвлүүлэх өгүүлэл, мэдүүлэх патент)	Publication of more than 2 articles in international journals registered in Web of Science
9	CALENDAR PLAN OF RESEARCH ACTIVITY AT THE NATIONAL UNIVERSITY OF MONGOLIA МУИС-д ирж ажиллах ажлын календарьчилсан төлөвлөгөө (судалгааны ажил, хэлэлцүүлэх болон удирдан явуулах семинар гэх мэт)	The results of the project will be presented at two seminars at the National University of Mongolia, where the results of the obtaining of modern nonlinear optical materials for the mid- and farinfrared spectral region will be demonstrated. The importance of such materials for modern photonics will be demonstrated. In the framework of the seminars, young scientists will be shown modern methods of obtaining the advance materials for the terahertz range.

10	VERIFICATION OF EXPECTED FURTHER COLLABORATION WITH HOST PROFESSOR AT THE NATIONAL UNIVERSITY OF MONGOLIA Судалгааны хамтын ажиллагаа цаашид тогтвортой үргэлжлэх хотолгоо	<p>Within the framework of the project, a scientific collaboration between the Department of Nonlinear Crystals of the Institute for Single Crystals of National Academy of Sciences of Ukraine in the person of Professor Prytula Igor and Professor of the National University of Mongolia Lhamserengin Enkhtur (Ph.D) is supposed. The project is supposed to propose new approaches for creating modern materials in the field of nonlinear optics, in particular, new materials based on derivatives of stilbazole salts. An analysis will be made of the nonlinear optical properties of the materials obtained, in particular, the efficiency of generation of second-harmonic laser radiation and the effects of self-interaction. Successful implementation of the project will allow establishing long-term scientific and technical cooperation between the Institute of Single Crystals of the National Academy of Sciences of Ukraine and the National University of Mongolia in the field of creating promising new materials for photonics.</p>
NONECONOMIC, ECONOMIC BENEFITS AND BROAD IMPACT OF EXPECTED RESEARCH OUTPUT		
11	ECONOMIC BENEFIT OF RESEARCH OUTPUTS Төслийн үр дүнгийн эдийн засгийн үр ашиг	The fundamental research project does not have direct economic benefits
12	NONECONOMIC BENEFIT OF RESEARCH OUTPUTS Төслийн үр дүнгийн эдийн засгийн бус үр ашиг	<p><i>Scientific advantages of this project:</i></p> <p>The main goal of the planned scientific research is to develop the physicochemical foundations of the synthesis, crystallization and growth of promising nonlinear optical single crystals of organic compounds of DAST derivatives. Prototypes of these crystals are practically absent among modern scientific developments. However, precisely such crystals as nonlinear optical emitters of the broadband THz and IR spectra may turn out to be the most promising for modern photonics. It is assumed that the organic crystals that will be obtained by the project will subsequently occupy a corresponding niche as highly efficient nonlinear optical materials for conversion (frequency doubling, parametric optical oscillator, etc.) and the generation of infrared (IR) laser radiation. The creation of modern technologies for producing high-quality nonlinear optical crystals is highly relevant. The tasks planned within the framework of the project have undoubtedly novelty and relevance. They are closely related to the problems of creating effective sources of radiation in the IR and THz ranges, and is a consequence of the successes achieved by the researchers, including the scientific group that offers the project in this area.</p>
13	BROAD IMPACT OF RESEARCH OUTPUTS Судалгааны үр дүнгийн нөлөө	To expand the training area for the teachers of the Department of Physics of the National University of Mongolia, gain experience and approaches to obtaining materials for the modern optoelectronics and photonics, increase the number and quality of the scientific papers, improve quality and collaboration with leading materials science centers in Ukraine.
14	RISK FACTORS DURING PROJECT IMPLEMENTATION Төслийн хэрэгжилтэд саад болж болзошгүй эрсдэл, хүчин зүйл	There are no factors that could impede the implementation of the project other than force majeure, such as health, international relations, budget and financial conditions.
